

Instructions

The Data Governance and HEDIS Reporting Assessment will help your practice assess your current data governance processes and work towards producing HEDIS-like key performance indicators (KPIs) for your practice's population of focus. The assessment is comprised of two parts:

- Part 1: Data Governance
- Part 2: HEDIS Reporting

Each part is accompanied by a tailored set of instructions that includes a recommendation for what staff member roles should participate in completing the questions. Regardless of the number of staff members involved, your practice will only submit one completed, two-part assessment.

For Part 1, please note there are two versions. Option 1 is for community health centers, health systems, or tribal health centers. Option 2 is for independent practices.

For Part 2, please note that your practice should complete the questions on general HEDIS reporting capabilities and the population of focus HEDIS reporting capabilities questions for your selected population of focus only.

Part 1: Instructions for Data Governance Questions

These questions are designed to help your practice better understand your existing data capabilities and where there are opportunities to improve data governance.

Please select the option that best describes your practice’s current capabilities for each component of data governance. The results of the self-assessment can be used to inform changes to your data governance policy and procedure (a separate deliverable for this milestone) that will help your practice effectively manage data for population health.

These questions should be completed by a group of practice leaders representing key clinical, IT, and administrative staff. For small practices, at least two staff members should participate in completing this assessment. Respondents are encouraged to take notes during their discussion for future reference.

Option 1: For Community Health Centers, Health Systems, or Tribal Health Centers

Part 1 Completed By	
Name	Role

1. Component: Governance Structure

The first step in good data governance is having a structure in place. This could be a group or committee with representatives from key clinical and administrative roles that meet regularly and oversee how data is managed. The size and scope of this group will vary by practice but should include decision-makers in the areas of operations, such as front desk administration, clinicians, quality, and IT support. Larger practices will require a more nuanced approach to governance than smaller practices due to their size and complexity of services. Organizations may evolve from having no formal governance to working with a committee that includes key representatives from both internal and external collaborative, data-sharing partners.

Question	Options
Which of the options best describes your practice's existing governance structure?	<ul style="list-style-type: none"> ○ No Formal Governance ○ Internal committee established but roles not well-defined ○ Internal committee with representation from all key internal areas and clear accountabilities ○ Committee expanded to include external stakeholders and workgroups

2. Component: Data Stewardship and Change Management

Data Stewardship and Change Management consist of protocols for evaluating internal or external changes, such as system upgrades or changes to HEDIS measure specifications, troubleshooting issues with technology vendors, user acceptance testing, and communicating changes to impacted parties. This also includes developing trainings or tip sheets to help impacted users adjust their processes and provide oversight to ensure that changes are understood and adopted.

Practices will often begin with no formal processes or protocols for managing data and reacting to issues as they arise. Over time, practices can evolve to be more proactive, establishing robust protocols for change management and processes in place to ensure data is accurate both internally and when shared with community partners.

Question	Options
Which of the options best describes your practice's current approach to data stewardship and change management?	<ul style="list-style-type: none"> ○ No formal process to define data, manage changes, or ensure data accuracy ○ Data may not be well-defined; best practices may be known but inconsistently applied; feedback and oversight are inconsistent ○ Data are defined and mapped; best practices are documented for key workflows and there is feedback to address variation ○ Robust change management ensures data quality and reporting accuracy which is used to improve quality scores and efficiency

3. Component: Decision-Making

Good Data Governance ensures that there are appropriate channels for collaborative decision-making so that key people are involved and informed, decisions are properly evaluated, there is a process for prioritization, alternatives are explored when appropriate, and decisions are documented for future reference. This is especially important where multiple parties or data-sharing partners are involved. Practices that are fundamental, independent,

and reactionary in decision-making will find it difficult to improve quality. Practices that evolve to a more collaborative, and proactive decision-making model will save time and be able to quickly make decisions around data to improve quality.

Question	Options
Which of the options best describes your practice’s current approach to decision-making?	<ul style="list-style-type: none"> ○ Leadership makes most decisions without a formal process or input ○ Decision-making processes exist but may be siloed or reactive in response to issues ○ Clearly defined, effective, internal collaborative decision-making processes ○ Well-defined decision-making processes engage external partners frequently to align community data strategy

4. Component: Communication and Escalation

Communication is key to ensuring people are using technology in an effective and meaningful way. Escalation happens when there is frustration, or worse, no communication. Practices’ communications may initially be independent and reactive, but it often becomes clear that a more comprehensive model is necessary. A clear communication and escalation path clarifies expectations and how issues will be identified and disseminated across stakeholders. It sets standards for turnaround time and resolution via service level agreements (SLAs) and identifies who should be notified next if SLAs are not met. This communication and escalation path also applies to external audiences like patients and community partners, enabling them to appreciate how this collaborative, proactive strategy improves care.

Question	Options
Which of the options best describes your practice’s current approach to communication and escalation?	<ul style="list-style-type: none"> ○ Basic ad hoc notification (e.g., system outages, upgrades) ○ Clear process to report data issues, understand status, and communicate back to staff ○ Service Level Agreements (SLAs) drive issue reporting, resolution, escalation, and communication ○ SLAs used consistently across internal and external systems

5. Component: Engagement

Engaging clinicians and staff who use the systems daily is key to good data governance. Practices will often make uninformed decisions that do not work for their environment because of a failure to engage the proper end users in discussions with technology vendors. Vendors will often provide ways for practice end users or “Super Users” to be involved in shaping their product roadmap or understanding new functionality. It is important to identify who from the practice will engage with vendors and how that information is communicated back to appropriate staff for feedback or action. Practices that engage with their vendors can take a more proactive and collaborative approach to their work, ultimately saving time and avoiding workarounds.

Question	Options
Which of the options best describes how your practice engages people in data and technology activities and decisions?	<ul style="list-style-type: none"> ○ Clinicians and staff are informed once decisions or changes have been made ○ Lead clinicians and staff Super Users are engaged ad hoc prior to making decisions or changes ○ Super Users are consistently engaged in decision-making, testing/training, and operationalizing changes ○ Super Users, managed care plans, and community partners are continuously and proactively engaged in optimization

6. Component: Expertise and Staffing

It is a mistake to leave IT governance to only IT staff! While they are an important part of a governance committee, they are not operational or clinical users of the systems and do not interact with patients. Data governance needs to outline who should be involved to ensure adequate engagement and define the role of vendors and IT support as it relates to ever-evolving technical and operational requirements. Practices can achieve sustained improvements by leveraging the expertise of clinicians, staff, and external data partners to collaborate and proactively define a vision for success.

Question	Options
Which of the options best describes your practice’s expertise and staffing as it relates to data and technology?	<ul style="list-style-type: none"> ○ Little internal expertise to manage systems/mostly rely on vendors ○ IT team has general expertise and partners with vendors to manage systems and enhancements ○ IT team partners with Super Users to manage and enhance system functionality ○ Governance committee sets vision for systems; IT sets technical standards and manages systems and enhancements

Option 2: For Independent Practices

Part 1 Completed By	
Name	Role

1. Component: Governance Structure

The first step in good data governance is having a structure in place. This could be a group or committee with representatives from key clinical and administrative roles that meet regularly and oversee how data is managed. The size and scope of this group will vary by practice but should include decision-makers in the areas of operations, such as front desk administration, clinicians, quality, and IT support. Practices may evolve from having no formal governance to working with a committee that includes key representatives from both internal and external collaborative, data-sharing partners.

Question	Options
Which of the options best describes your practice’s existing governance structure?	<ul style="list-style-type: none"> <input type="radio"/> No Formal Governance <input type="radio"/> Internal committee established with defined roles <input type="radio"/> Committee expanded to include external stakeholders

2. Component: Data Stewardship and Change Management

Data Stewardship and Change Management consists of protocols for evaluating internal or external changes, such as system upgrades or changes to HEDIS measure specifications, troubleshooting issues with technology vendors, user acceptance testing, and communicating changes to impacted parties. This also includes developing trainings or tip sheets to help impacted users adjust their processes and provide oversight to ensure that changes are understood and adopted.

Practices will often begin with no formal processes or protocols for managing data and reacting to issues as they arise. Over time, practices can evolve to be more proactive, establishing robust protocols for change management and putting processes in place to ensure data is accurate both internally and when shared with community partners.

Question	Options
Which of the options best describes your practice's current approach to data stewardship and change management?	<ul style="list-style-type: none"> ○ No formal process to define data, manage change, or ensure data accuracy ○ Data may not be well-defined; best practices may be known but inconsistently applied; feedback and oversight are inconsistent ○ Robust change management ensures data standards are adhered to, and reports are accurate

3. Component: Decision-Making

Good Data Governance ensures that there are appropriate channels for collaborative decision-making so that key staff are involved and informed, decisions are properly evaluated, there is a process for prioritization, alternatives are explored when appropriate, and decisions are documented for future reference. This is especially important where multiple parties or data-sharing partners are involved. Practices that are fundamental, independent, and reactionary in decision-making will find it difficult to improve quality. Practices that evolve to a more collaborative and proactive decision-making model will save time and be able to quickly make decisions around data to improve quality.

Question	Options
Which of the options best describes your practice's current approach to decision-making?	<ul style="list-style-type: none"> ○ Leadership makes most decisions without a formal process or input ○ Clearly defined, effective, internal collaborative decision-making processes ○ Well-defined decision-making processes engage external partners frequently to align community data strategy

4. Component: Communication and Escalation

Communication is key to ensuring people are using technology in an effective and meaningful way. Escalation happens when there is frustration, or worse, no communication. Practices' communications may initially be independent and reactive, but it often becomes clear that a more comprehensive model is necessary. A clear communication and escalation path clarifies expectations and how issues will be identified and disseminated across stakeholders. It sets standards for turnaround time and resolution via service level agreements (SLAs) and identifies who should be notified next if SLAs

are not met. This communication and escalation path also applies to external audiences like patients and community partners, enabling them to appreciate how this collaborative, proactive strategy improves care.

Question	Options
Which of the options best describes your practice’s current approach to communication and escalation?	<ul style="list-style-type: none"> ○ Basic ad hoc notification (e.g. system outages, upgrades) ○ Clear process to report data issues, understand status, and communicate back to staff ○ Service Level Agreements (SLAs) drive issue reporting, resolution, escalation, and communication (internal and external)

5. Component: Engagement

Engaging clinicians and staff who use the systems daily is key to good data governance. Practices will often make decisions that do not work for their environment because the proper end users are not engaged in discussions with technology vendors. Vendors will often provide ways for practice end users or “Super Users” to be involved in shaping their product roadmap or understanding new functionality. It is important to identify who from the practice will engage with vendors and how that information is communicated back to appropriate staff for feedback or action. Practices that engage with their vendors can take a more proactive and collaborative approach to their work, ultimately saving time and avoiding workarounds.

Question	Options
Which of the options best describes how your practice engages people in data and technology activities and decisions?	<ul style="list-style-type: none"> ○ Clinicians and staff are informed once decisions or changes have been made ○ Lead clinicians and staff Super Users are engaged in decision-making, upgrades, and ongoing training ○ Super Users, Managed Care Plans and community partners are continuously and proactively engaged in optimization

6. Component: Expertise and Staffing

It is a mistake to leave IT governance to only IT staff! While they are an important part of a governance committee, they are not operational or clinical users of the systems and do not interact with patients. Data governance needs to outline who should be involved to ensure adequate engagement and define the role of vendors and IT support as it relates to ever-evolving technical and operational requirements. Practices can achieve sustained improvements by leveraging the expertise of clinicians, staff, and external data partners to collaborate and proactively define a vision for success.

Question	Options
Which of the options best describes your practice's expertise and staffing as it relates to data and technology?	<ul style="list-style-type: none"><li data-bbox="499 540 1335 570">○ Little internal expertise to manage systems/mostly rely on vendors<li data-bbox="499 573 1446 602">○ IT team has general expertise and partners with vendors to manage systems<li data-bbox="499 605 1808 634">○ IT team partners with governance committee to manage and enhance system functionality and integration

Part 2: Instructions for HEDIS-Like Data Questions

These questions will help you evaluate how HEDIS data is captured and used within your practice and can help your practice pinpoint data gaps and inefficient processes. Your practice should complete the questions on general HEDIS reporting capabilities and the population of focus HEDIS reporting capabilities questions for your selected population of focus only.

For each question, please select the tools or sources of data used and evaluate the efficiency of the process.

- **For the Tools column:** Please select all tools that your practice utilizes. If your practice does not currently do this process, please select, “We do not do this.”
- **For the Process Efficiency column:** Please select the efficiency that most closely matches your current process. If your practice does not currently do this process, please select, “We do not do this.”

These questions should be completed by a group of care team representatives (i.e., providers, clinical support staff) and representatives from Quality, IT, or Operations departments that play a key role in improving the quality of care. For small practices, at least two staff members should participate in completing this assessment. Any data gaps or opportunities to automate processes should be noted as they may be addressed as part of the data implementation plan (Data to Enable PHM milestone 2).
